Professional Summary

Computer Science Engineering student with hands-on experience in software engineering, backend development, and Generative AI applications.

Experienced in building scalable APIs, integrating LLM workflows, and developing production-ready applications serving thousands of concurrent users.

Strong foundation in full-stack engineering, team leadership, and collaborative development.

Professional Experience

Backend Lead Intern – Hexaware Technologies *Feb 2026 – Present*

- Led a 3-member backend sub-team within a 9-member backend organization, handling task distribution and integration workflows; additionally on-boarded and mentored 3 newly joined engineers as senior on the project.
- Designed and implemented REST APIs, schema-driven architectures, and database workflows using Python and FastAPI to serve approximately 3,000 concurrent users under production load.
- Built asynchronous AI evaluation pipelines using Redis queues and `asyncio` for LLM-driven answer processing, with Alembic managing version-controlled schema migrations and Ruff enforcing code quality standards.
- Contributed to CI/CD pipelines, production monitoring, and deployment validation, achieving a 3% reduction in backend performance overhead.

Web Developer Intern – Infotak Solutions *Aug 2025 – Jan 2026*

- Developed and deployed 8+ full-stack web applications including an e-commerce platform and an IoT-integrated software system, working across frontend, backend, and database layers.
- Optimized database performance under high-traffic conditions through strategic indexing and query restructuring, reducing load on critical application endpoints.
- Improved frontend performance and accessibility by implementing lazy loading, WCAG compliance, and responsive UI patterns, resulting in measurable load time reductions across multiple projects.

Software Development Intern – J7 Technology Solutions Pvt. Ltd *Aug 2025 – Sept 2025*

- Contributed to a school CRM project as part of a 5-member team, working on student, teacher, and parent-facing modules using Next.js, Node.js/Express, MongoDB, and AWS.

Projects

School CRM Platform – Full-Scale Digital School System *(Private Codebase)* *(Next.js, Node.js, Express.js, MongoDB, AWS)*

- Digitalized end-to-end school operations across 7 roles — students, parents, teachers, HR, principal, support staff, and payment workflows — as part of a 5-member team
- Owned and built the student, parent, and teacher-facing modules including attendance, communication, and academic tracking features
- Deployed on AWS with MongoDB handling relational school data across all user roles and operational modules

Spendly – Personal Expense Tracker *(React 18, Vite, Node.js, Express.js, MongoDB, Tailwind CSS)*

- Built a full-stack expense tracker with CRUD for expenses, per-category budget management, and a dashboard covering category breakdown, daily trend, and budget-vs-spending comparisons
- Implemented dual authentication — JWT (email/password with bcrypt, salt rounds 12) and Google OAuth — with a password reset flow via Nodemailer and 1-hour expiry tokens
- Secured the API with Helmet, rate limiting, express-validator, and JWT middleware; built paginated, filterable expense endpoints supporting search, date range, category, and sort parameters
- Built the frontend as a React 18 SPA with Vite, Tailwind CSS, Framer Motion animations, optimistic UI updates, and React Context for global auth state

Elevatr – Job and Internship Portal *(Next.js, TypeScript, FastAPI, PostgreSQL)*

- Built a two-sided hiring platform for students and recruiters — students can browse jobs, bookmark roles, and track application status; recruiters can post jobs and monitor candidate pipelines

- Implemented role-based dashboards with real-time API data, summary metric cards (open jobs, applications, pipeline stages), and optimistic UI updates on job creation
- Designed a FastAPI + PostgreSQL backend with PBKDF2-SHA256 password hashing (600k iterations, constant-time verification via `hmac.compare_digest`) replacing passlib/bcrypt due to runtime incompatibility
- Built the frontend in Next.js with TypeScript, resolved API prefix duplication through path normalization in the API client, and maintained a lint-clean codebase with ESLint next/core-web-vitals

Arya Productions – Company Website *(HTML, CSS, JavaScript)*

- Built a multi-section responsive company website for an industrial storage solutions firm covering About, Services, Products, and Contact pages
- Integrated Google Maps and contact functionality; maintained consistent brand identity with a custom maroon/white theme across all sections
- Improved page accessibility and cross-browser compatibility, optimising layout for both desktop and mobile viewports

Technical Skills

Languages	Python JavaScript TypeScript Java SQL
Frontend	React.js Next.js Tailwind CSS Vite HTML5 CSS3
Backend	Node.js Express.js FastAPI
Databases	MongoDB PostgreSQL MySQL
AI/ML	LLMs LangSmith LangChain GenAI Applications
Cloud/DevOps	AWS Docker Git GitHub CI/CD
Tools	VS Code Postman Redis Alembic Ruff

Achievements

- Selected – MSME 5.0 Government Funding Scheme | MindSync+ (2026)
- 1st Place – QR Debugging Event (Namma VEC 2026)
- 2nd Place – App Development (Namma VEC 2025)
- Participant – Cognizant Technoverse Hackathon 2026
- Participant – VISA 24 Hours AI Hackathon (IITM, 2025)
- Participant – Web Designing Contest (Amrita, 2025)
- Participant – Python Event (SaiRam Engineering, 2024)

Certifications

- NPTEL – Natural Language Processing
- NPTEL – Deep Learning
- NPTEL – Modern C++
- NPTEL – Programming in Java
- Udemy – Complete Python Course

Education

B.E Computer Science Engineering (2023–2027)
Velammal Engineering College
CGPA: 8.42

AISSCE – Class XII (2022–23)
Velammal Vidhyashram - 68.6%

AISSE – Class X (2020–21)
Velammal Vidhyashram - 81%
